HYDRO GENERATOR: ■ Async ■ Sync ■ Up to 235MW

ABOUT US

Since 1989, Dokar Ltd. has been building the energy infrastructure of Turkey, mainly by focusing on the turnkey construction of dams, irrigation facilities and installation of mechanical/electrical equipment and instrumentation under various state contracts. Through projects realized, Dokar has acquired invaluable experience and problem solving capability, not only in technical terms but also in relationship management with government & state authorities.

Dokar, relying on her past experience of building dams and thermal power plants, is very much involved in the renewable energy market as well. We have recently signed a strategic partnership agreement with Serman Energy Srl. an Italian hydro turbine, valve and spiral case producer and Elprom-Zem a Bulgarian hydro-generator firm manufacturing from 10kVA up to 235MVA range products. Dokar with vast experience in designing and building hydraulic structures and Serman with water turbine design and manufacture, Elprom-Zem with its hydro-generator manufacturing capability, the partnership has the unique interlocking matrix of customized components engineered into one electrifying program to offer a complete water-to-wire hydroelectric power plants HEPP not only in Turkey but also elsewhere.

ABOUT US

Founded in 1995, Serman started life as a small business on an artisan scale concerned with providing services and maintenance in the mechanical sector, focussing above all on industrial plants and the energy sector.

This small industry has its roots embedded in a region boasting an extraordinary wealth of technical expertise and tradition, which has been handed down from generation to generation.

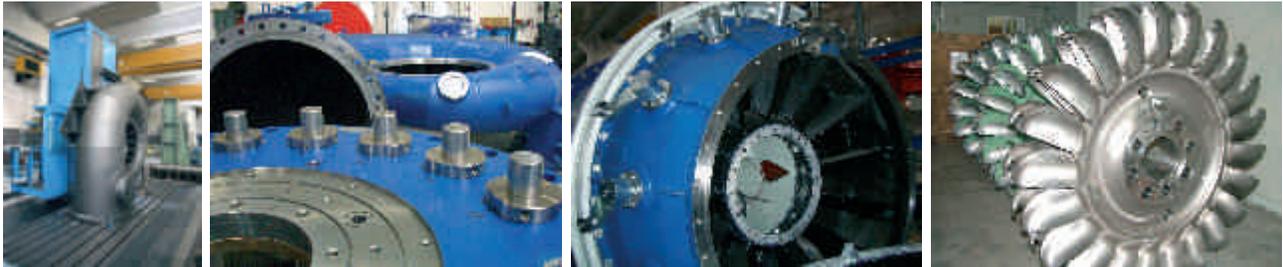

Over the years, they acquired a set of skills and references that led them to become a benchmark in the tricky management of the scheduled and non-routine maintenance of plants.

ABOUT US

In 2008, hefty investments in technology and human resources, as a result of the company changing hands, led to the birth of the Serman Energy Project. An ambitious, far-sighted project that was keenly advocated by the new company owners, who already held the reins of one of the world's major lifting system manufacturers.

The company switched from their original maintenance role to the more strategic and organic role of global player, effectively establishing themselves as an ideal partner in the consulting, design, production and maintenance of small hydroelectric power stations. Turnkey projects that begin with the economic and financial analysis of a plant's profitability.

ABOUT US

ELPROM-ZEM Co., a joint stock company, is the biggest manufacturer of electrical machines in Bulgaria and it is more than half-a-century long experience in their manufacturing. Its production is well known in all countries of CIS and East Europe, as well as in many West European countries, Asia, Africa and Latin America. The company employs more than 300 highly specialized employees and many customers rely on its services and backup to maintain their plant efficiency.

As a result of the changes, which occurred in The Bulgarian society and its orientation to the market economy, the company has been privatized in 1997 and 97% of its capital are private property. The main shareholder, possessing the control package of shares, is Industrial holding "BULGARIA".

ABOUT US

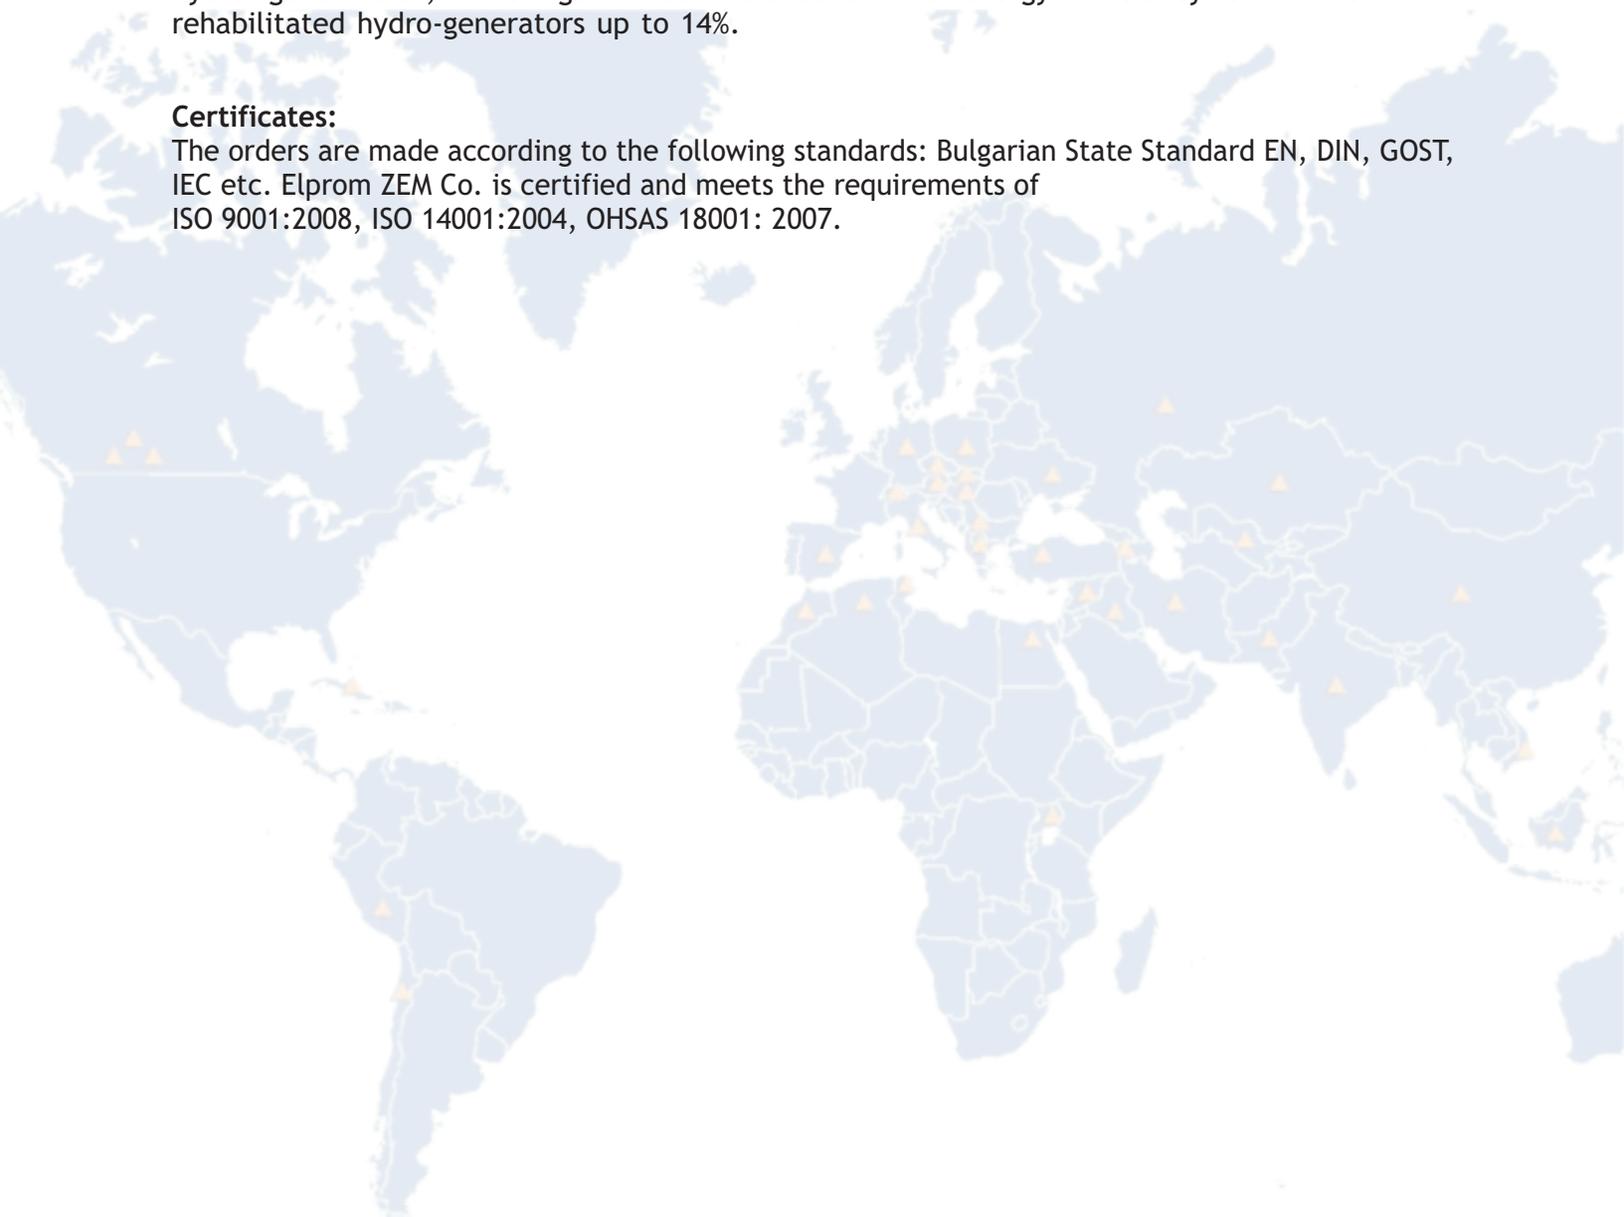

ELPROM-ZEM Co. produces and sells a wide range of Hydro generators up to 235 MVA power output, produced under license of TOSHIBA - Japan, and with TOSHIBA equipment, including equipment for final treatment of the insulation in vacuum and under pressure. More than 180 hydro power plants in Bulgaria and her neighboring countries and a few dozen abroad are equipped with successfully operating ELPROMZEM's hydro generators.

Elprom ZEM Co. acquired VPI technology to increase energy efficiency - a complete line for production of hydro generators' insulation called "GLOBAL VPI" (Vacuum Pressure Impregnation) system. This cutting edge technology is delivered from Germany and England to applied science and patent number 65201 stating a "New insulation system for high voltage stator winding for hydro generators", which guarantee increase of the energy efficiency of all new and rehabilitated hydro-generators up to 14%.

Certificates:

The orders are made according to the following standards: Bulgarian State Standard EN, DIN, GOST, IEC etc. Elprom ZEM Co. is certified and meets the requirements of ISO 9001:2008, ISO 14001:2004, OHSAS 18001: 2007.

MANUFACTURED HYDROGENERATORS FOR HPP and SHPP

**TSANKOV KAMAK HYDRO POWER STATION
STUDEN KLADENETS HYDRO POWER STATION
REPUBLIC OF BULGARIA**

Reference Letter

To Whom It May Concern,

Reference is made to the bilateral Memorandum of Understanding among the REPUBLIC OF BULGARIA and the REPUBLIC OF AUSTRIA, to work with joint efforts on the implementation of the large scale Hydro Power Stations in Bulgaria, namely the TSANKOV KAMAK HYDRO POWER STATION and the STUDEN KLADENETS.

Cooperation has been formed among ANDRITZ HYDRO GmbH of Austria and ELPROM ZEM of Bulgaria Co. to achieve this challenging target and carry out the implementation work of the Synchronous Generators for the said Hydro Power Stations.

Whereas ANDRITZ HYDRO GmbH acted as the Main Contractor towards the Employer NATIONAL ELECTRIC COMPANY of Bulgaria and ELPROM ZEM Co. acted as the Sub-Contractor for certain assigned Generator Components and Generator Key Components.

The work performed by ELPROM ZEM was carried out under the direct supervision of ANDRITZ HYDRO and comprised Detail Design, Procurement, Manufacturing and Installation of the assigned Generator Components.

Technical Main Data of the TSANKOV KAMAK Hydro Generators (2 Units):

- Nominal power **$S_n = 50$ MVA**
- Nominal voltage **$U_n = 10.5$ kV**
- Power factor **$\cos\varphi = 0.85$**
- Frequency **$f = 50$ Hz**
- Nominal rotation speed **$n = 428,6$ 1/min**

Technical Main Data of the STUDEN KLADENETS Hydro Generators (1 Unit):

- Nominal power **$S_n = 23$ MVA**
- Nominal voltage **$U_n = 10.5$ kV**
- Power factor **$\cos\varphi = 0.85$**
- Frequency **$f = 50$ Hz**
- Nominal rotation speed **$n = 300$ 1/min**

The work performed by ELPROM ZEM Co. was successfully completed and has met the anticipated project targets. The work was carried out with professionalism and in a pleasant working environment among all involved project team members.
